

SOHAM MHATRE

Software Engineer & Data Specialist

Pen, India | work.sohamm@gmail.com | +91 9404109960 | [linkedin.com/in/253019-soham-mhatre](https://www.linkedin.com/in/253019-soham-mhatre) | github.com/SoHaM-250143 | [My Portfolio](#)

PROFESSIONAL SUMMARY

Computer Applications postgraduate (MCA) with a versatile technical foundation spanning full-stack web development, machine learning, and data forensics. Experienced in building robust web pipelines, engineering secure backend architectures, and deploying advanced data processing models using React, Node.js, Python, and clinical NLP. Highly analytical problem-solver eager to leverage a diverse skill set to deliver scalable, secure, and data-driven technological solutions across cross-functional teams.

EDUCATION

BCA —Chhatrapati Shivaji Maharaj University, Navi Mumbai 2021 – 2024

Relevant coursework: Studied systems analysis, business intelligence, and database management.

MCA —PES Modern College Of Engineering, Pune 2024 – 2026

Relevant coursework: Coursework covered data analytics, system analysis, and databases.

PROJECTS

Personal Developer Portfolio | 2026

Technologies: React, Next.js, Tailwind CSS, Material UI, JavaScript, Vercel

- Designed and developed a fully responsive frontend portfolio application to showcase full-stack projects, technical competencies, and professional achievements.
- Implemented dynamic UI components and server-side rendering using React and Next.js alongside modern CSS frameworks (Tailwind, Material UI), ensuring an intuitive, accessible, and fast-loading user experience across both desktop and mobile devices.
- Configured continuous deployment workflows through Vercel, demonstrating strong proficiency in modern web hosting, CI/CD, and version control integration..
- Optimized asset delivery and component rendering, achieving high performance scores and ensuring flawless cross-browser compatibility.

CliniFlow AI— Rare Disease Detection System | Feb 2026 – May 2026

Technologies: Node.js, JavaScript, Python, REST APIs, FastAPI, MongoDB, BioBERT, ResNet50

- Engineered a full-stack research web application designed to process, extract, and structure complex multimodal datasets (text reports and imagery).
- Designed backend architectures to seamlessly handle heavy data workflows, ensuring low-latency communication between the database layer and the client-facing interface.
- Integrated advanced machine learning models via FastAPI to classify complex data, utilizing MongoDB for flexible, highly scalable data storage.

Clinical Data Forensics System | Jan 2026 – Mar 2026

Technologies: Node.js, Python, SQL, Web Security

- Developed a web-integrated forensic system focused on backend security, log tracking, and unauthorized access detection without relying on automated machine learning architectures.
- Built server-side monitoring tools to audit application logs, validate data structures, and maintain strict data integrity across the platform.
- Implemented robust data protection measures across the application layer, emphasizing secure authentication flows and backend resilience.
- Managed secure database configurations and implemented strict credential rotation protocols to safeguard sensitive data and prevent unauthorized exposure.

SKILLS

Web Technologies: React, Next.js, Node.js, JavaScript, HTML/CSS, Tailwind CSS, Material UI, RESTful APIs, FastAPI

Programming & Databases: Python, Java, SQL, MySQL, Oracle, MongoDB

Machine Learning & Data: Clinical NLP, BioBERT, LSTM, ResNet50, Data Processing Pipelines, Electronic Data Processing, Advanced Excel, Power BI, Tableau

Architecture & Deployment: Vercel, Server-side monitoring, System Architecture, Web Security Logging

Tools & Practices: Git/GitHub, VS Code, JIRA (issue tracking), Agile Documentation

Soft Skills: Stakeholder Communication, Research & Analysis, Project Coordination, Attention to Detail, Cross-Team Collaboration
