PROFESSIONAL SUMMARY

React, Node.js, Python, SQL, and Machine Learning expert with an MCA in Computer Applications, full-stack development, and data forensics. Scalable architecture, secure pipelines, and machine learning-driven data processing (BioBERT, ResNet50, FastAPI) engineered for performance, data integrity, and cross-functional delivery. Proven impact: 30% faster load times, sub-200ms latency, 100% audit-log traceability, strict data integrity across production systems.

TECHNICAL SKILLS

Web Technologies: React, Next.js, Node.js, JavaScript, HTML/CSS, Tailwind CSS, Material UI, RESTful APIs, FastAPI

Programming & Databases: Python, Java, SQL, MySQL, Oracle, MongoDB

Machine Learning & Data: Clinical NLP, BioBERT, LSTM, ResNet50, Data Processing Pipelines, Electronic Data Processing, Advanced Excel, Power BI, Tableau

Architecture & Deployment: Vercel, Server-side Monitoring, System Architecture, Web Security Logging

Tools & Practices: Git/GitHub, VS Code, JIRA, Agile Documentation

Communication & Collaboration: Cross-functional Collaboration, Technical Documentation, Stakeholder Presentations, Requirements Communication

AI Tools: Claude, Cursor, GitHub Copilot, ChatGPT

PROJECTS

Personal Developer Portfolio

January 2026 – Present

Technologies: React, Next.js, Tailwind CSS, Material UI, JavaScript, Vercel

- Developed a responsive frontend portfolio application to showcase 4 full-stack projects and core technical competencies.
- Constructed UI components and server-side rendering utilizing React and Next.js, improving page load speeds by 30% across desktop and mobile devices.
- Automated continuous deployment workflows through Vercel, reducing release cycles and version control integration time by 15%.
- Accelerated asset delivery and component rendering, achieving a 98 Lighthouse performance score for accessibility and cross-browser compatibility.
- Documented component architecture, coding standards, and deployment workflows to support future collaboration and streamline onboarding.

CliniFlow – Rare Disease Detection System

February 2026 – May 2026

Technologies: Node.js, JavaScript, Python, REST APIs, FastAPI, MongoDB, BioBERT, ResNet50

- Engineered a full-stack research web application to process, extract, and structure over 1,500 multimodal data points spanning text reports and imagery.
- Architected backend workflows to handle heavy data requests, ensuring sub-200ms latency communication between the database layer and the client interface.
- Deployed machine learning models via FastAPI to classify data anomalies, utilizing MongoDB to scale storage capacity by 40% for flexible data retention.
- Collaborated with cross-functional research and clinical stakeholders, communicating technical requirements to align data models with domain-specific evaluation criteria.

Clinical Data Forensics System

January 2026 – March 2026

Technologies: Node.js, Python, SQL, Web Security

- Programmed a web-integrated forensic system focused on backend security, successfully tracking 100% of application logs and unauthorized access attempts.
- Created server-side monitoring tools to audit application logs and validate 50+ data structures, maintaining strict data integrity across the platform.
- Executed data protection measures across the application layer, resolving 3 critical secure authentication flows to enhance backend resilience.
- Administered secure database configurations and rotated credential protocols monthly to safeguard sensitive data and prevent unauthorized exposure.
- Presented security audit findings and technical documentation to stakeholders, translating complex risk assessments into clear, actionable recommendations.

EDUCATION

MCA – PES Modern College of Engineering, Pune

2024 – 2026

Relevant Coursework: Data Analytics, System Analysis, Databases

BCA – Chhatrapati Shivaji Maharaj University, Navi Mumbai

2021 – 2024

Relevant Coursework: Systems Analysis, Business Intelligence, Database Management
